Roll no.: 24BCB120D

Name: Takshil Patel

LAB SESSION 1: PROJECT SELECTION AND TEAM FORMATION

Theme: **AIRLINE RESERVATION SYSTEM**

1. **Team members list & roles:**
   - Namraa Patel(24BCB119D): Product Owner + Developer (Manage requirements, prioritize tasks, and develop the system.)
   - Takshil Patel(24BCB120D): Scrum Master + Developer/Tester (Manage the task board, track progress, develop, and test the system.)

2. **Project Abstract:**
   "The **Airline Reservation System** is a web based application for managing flight reservations efficiently. It allows users to register, log in, search for available flights, and view flight details. Users can check seat availability and select seats according to their preferences. The system allows passengers to enter their details and make flight reservations. Users can also view and cancel their bookings when required. Administrators can manage flights, schedules, seats, passengers, and reservations. The system reduces manual work and maintains reservation information in a centralized database. The project will be developed using **Software Engineering principles and Agile methodology**."

3. **Questionnaire (Asked to client):**
   - Who are the primary users of the Airline Reservation System?
   - Should users be required to register and log in before making a reservation?
   - What information should be collected from passengers during registration and booking?
   - Should users be able to search for flights based on source and destination?
   - Should users be able to specify their preferred travel date while searching for flights?

- What flight information should be displayed to the user, such as flight number, departure time, arrival time, and fare?
- Should the system display the number of available seats for each flight?
- Should passengers be allowed to select their preferred seats?
- Should the system allow users to book tickets for multiple passengers in a single reservation?
- Should users be able to view their current and previous reservations?
- Should users be allowed to cancel their reservations?
- Should the system support online payment for flight reservations?
- What payment methods should be supported by the system?
